

EXP-03

AIM:

To write a basic Servlet program for the Job Portal website that demonstrates the use of Java Servlets by displaying a welcome message when accessed through a browser.

ALGORITHM:

1. Input:

- The user makes an HTTP request through a browser by entering a URL.

2. Servlet Program Flow:

1. Create a Servlet Class:

- Define a Java class that extends the HttpServlet class.
- Override the doGet() method to handle HTTP GET requests.

2. Handle HTTP Request:

- Inside the doGet() method:
- Set the response content type as text/html.
- Use PrintWriter to send output to the browser.
- Display a welcome message for the Job Portal.

3. Compile the Servlet Class:

- Compile the Java file using javac to generate the .class file.

4. Deploy the Servlet:

- Place the compiled class inside /WEB-INF/classes.
- Configure using annotations or web.xml.

5. Access through Browser:

- Start Apache Tomcat server.
- Open browser and enter URL:

http://localhost:8080/yourproject/hello

Program

Hello.java

```
package WTMA;
```

```
import java.io.*;
```

```
import jakarta.servlet.ServletException;
```

```
import jakarta.servlet.http.HttpServlet;
```

```
import jakarta.servlet.http.HttpServletRequest;
import jakarta.servlet.http.HttpServletResponse;
import jakarta.servlet.annotation.WebServlet;

@WebServlet("/hello")
public class Hello extends HttpServlet {

    private static final long serialVersionUID = 1L;

    public void doGet(HttpServletRequest request, HttpServletResponse response)
        throws ServletException, IOException {

        response.setContentType("text/html");
        PrintWriter pw = response.getWriter();

        pw.println("<html><head><title>Job Portal</title></head><body>");
        pw.println("<h1>Welcome to Job Portal</h1>");
        pw.println("<p>Your gateway to find your dream job.</p>");
        pw.println("</body></html>");
    }
}
```

OUTPUT:

RESULT:

The Servlet program for the Job Portal project is successfully created and executed. The browser displays the response generated by the Servlet when accessed through the given URL.
