

EXP.NO: 4

AIM:

To design a web form for the Job Portal that accepts applicant name and age, and to develop a Servlet program to process the form data and display it back on the browser.

ALGORITHM:

1. Input:

- **The user enters their name and age in the job portal form.**
 - **The form is submitted to the server.**
-

2. Form Creation:

- 1. Create an HTML form using <form> tag.**
 - 2. Add input fields:**
 - **Name (text)**
 - **Age (number)**
 - 3. Add a submit button.**
 - 4. Set:**
action="ApplicantServlet"
method="post"
-

3. Servlet Program Flow:

1. Create Servlet Class:

- **Create a Java class extending HttpServlet.**

- **Use annotation:**
@WebServlet("/ApplicantServlet")
-

2. Handle Request:

- **Override doPost() method.**
 - **Retrieve values using:**
request.getParameter("name");
request.getParameter("age");
-

3. Process Data:

- **Store name and age in variables.**
 - **Optionally validate age.**
-

4. Generate Response:

- **Set content type:**
response.setContentType("text/html");
 - **Use PrintWriter to display output:**
Welcome [name]! You are [age] years old and ready to
explore job opportunities.
-

4. Compile the Servlet:

- **Compile using javac.**
 - **Generate .class file.**
-

5. Deploy the Servlet:

- **Place class file in:**

WEB-INF/classes

- **Configure using annotations or web.xml.**
-

6. Execute the Program:

- **Start Apache Tomcat server.**
- **Open browser and access:**

`http://localhost:8080/your-project/index.html`

7. Output Display:

- **After submitting the form, the browser displays:**
Welcome [name]! You are [age] years old and ready to explore job opportunities.
-

CODE

Index.html

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
    <title>Job Portal - Applicant Details</title>
```

```
</head>
```

```
<body>
```

```
<h2>Enter Applicant Details</h2>
```

```
<form action="ApplicantServlet" method="post">
```

Name:

```
<input type="text" name="name" required><br><br>
```

Age:
<input type="number" name="age"
**required>

**

<input type="submit" value="Submit">

</form>

</body>
</html>

ApplicantServlet.java

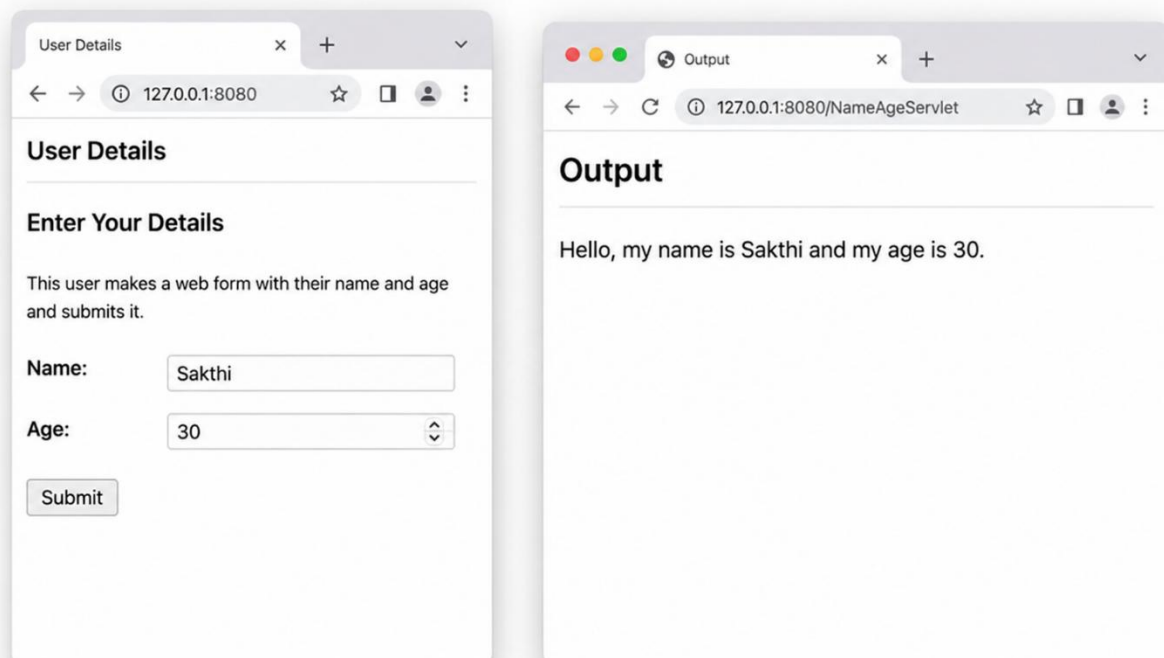

```
import java.io.*;  
import jakarta.servlet.*;  
import jakarta.servlet.annotation.WebServlet;  
import jakarta.servlet.http.*;  
  
@WebServlet("/ApplicantServlet")  
public class ApplicantServlet extends HttpServlet {  
  
    protected void doPost(HttpServletRequest request,  
        HttpServletResponse response)  
        throws ServletException, IOException {  
  
        String name = request.getParameter("name");  
        String age = request.getParameter("age");  
  
        response.setContentType("text/html");  
        PrintWriter out = response.getWriter();
```

```
out.println("<html>");
out.println("<head><title>Output</title></head>");
out.println("<body>");

    out.println("<h2>Welcome, " + name + "! You are "
+ age + " years old and ready to explore job
opportunities.</h2>");

    out.println("</body>");
    out.println("</html>");
}
```

OUTPUT:

RESULT:

The Job Portal web form was successfully created, and the Servlet program processed the applicant input and displayed the result on the browser.
